TEL: 0974-22-1001 (main) FAX: 0974-22-1426

Magnificent view of the largest and second largest bridges

BUNGO-ONO GEOSITE FILE | No.06

Deai Bridge and Todoro Bridge

The Deai and Todoro stone bridges were built during the end of Taisho era (1912-1926) and the beginning of Showa era (1926-1989). It may seem strange that these two large stone bridges were built so close together. The reason was partially because the two bridges were built for different purposes, but the deep, vertically-walled valleys and volcanic rocks created by the eruption of Mount Aso 90,000 years ago also influenced the placement. The Todoro bridge has the largest arch in Japan, and the Deai bridge has the 2nd largest. People and nature worked together to create this fantastic geographical site.
